

Granada Crystallization Boxes (GCB) Domino[®]

FOR PROTEIN CRYSTALLIZATION

GCB-Domino is the only flat test tube available in the market. Perfect for your capillary counterdiffusion experiments.

Características principales:

-
Easy visualization of the crystals

-

Up to six simultaneous capillary experiments

- For long capillaries (50 mm) allowing better optimization of the crystals size and quality

- The volume of protein solution per experiment is now reduced down to 300 nanolitres.

As effective as the GCB original, but now you need less volume of protein per experiment!

Triana Science & Technology offers ***GCB-Domino*** in packages of 24 units:

Reference

Price per package

GCB - D - 24

130 €

You can use the empty GCB-Domino and fill them yourself with a gel plug and our [screening kits specially designed for capillary counterdiffusion](#) .

Remember you can also buy the GCB-Domino prefilled with different precipitating cocktails designed for [capillary counterdiffusion kits](#) .

To make an order, just send us an email to triana@trianatech.com with a list of the required products and services you need or from the menu "orders".
