

Capillary Counterdiffusion Kits "a la carte"

For users of structural genomics platforms.

For improving the quality of crystals obtained by classical crystallisation techniques.

Let us know the crystallisation conditions found in your vapour diffusion screening kits and our experts will prepare for you the capillary counter-diffusion kits needed to grow your crystals in capillaries. Easy and inexpensive. Just fill the form and send it to us.

As our experts study your form, you will receive the list of recommended prefilled GCBs to improve the crystal quality. Each crystallisation condition requires normally three GCBs. The price of one prefilled GCB is 14 €.
